I-V Characteristic of a Blue LED
$V(I) = nV_T \ln\left(\frac{I}{I_s} + 1\right) + IR_s$
$I_s = (7.98e - 10 \pm 2.56e - 11)$ A
$n = 4.80 \pm 0.02$
$R_s = 0.002 \pm 0.001\ \Omega$
Realistic Diode Fit ($R^2 = 0.86458$)
