I-V Characteristic of a Red LED
$V(I) = nV_T \ln\left(\frac{I}{I_s} + 1\right) + IR_s$
$I_s = (4.36e - 11 \pm 6.37e - 13)$ A
$n = 2.89 \pm 0.01$
$R_s = 0.002 \pm 0.001\ \Omega$
Realistic Diode Fit ($R^2 = 0.7560$)
